Responsible and fair metal management

- Soft solders from sustainable and fair resources

Extracting raw materials and

-  paying fair prices
-  protecting the environment
-  fostering occupational safety
-  granting children a carefree childhood

For some years now, our approach has been to source our tin preferentially from producers who are committed both to their staff in the form of good working conditions and to the environmental conditions within the mining areas. The wages of all employees must be sufficient to guarantee the families a carefree future. Therefore, one of our preferred tin producers is MINSUR, a Peruvian company whose corporate philosophy is based on transparency and thus on environmental protection, occupational safety and fair working conditions. Especially customers who have the highest purity requirements (in particular low Pb-values < 50 ppm) or require an European origin are supplied by us with solders made from European electrolytically won tin.

Since this year we have been able to officially confirm that we process **fair-trade pure tin** on a scale that allows us to produce and supply all FELDER soft solders used in the electronics industry in  quality.

With your use of  products you can also support the fostering of fair working conditions and of activities to protect the environment as well as the fight against child labour worldwide.

Without ifs and buts – Without surcharge – Always in  quality

FELDER  - FAIR QUALITY
